

Domain-Join your Devices In Microsoft 365 Intune

Product Name: Microsoft Intune, Microsoft 365

Date: 📅 Apr 6, 2026

Product Overview 👁️👁️

Intune joining a device to a domain in M365 (Microsoft 365) typically involves using a **Domain Join configuration profile** within the Microsoft Intune admin center to hybrid-join Windows devices, or utilizing **Autopilot** for automated enrollment. The process involves creating a profile with specific Active Directory (AD) information—such as computer name prefix and FQDN—and assigning it to devices.

Product Objectives 🎯

Show how a cloud/System Administrator uses the automation enrollment in M365 Intune on M365 Cloud. Both Manually and from OEM "**Bulk**" Installs to simply integration of Devices into your Organization's Infrastructure. Prioritizing get Devices into users hands with all the Proper company/security/compliance Policies added in to keep your invested inventory ready for use, easy to manage, and faster to Decommission when Device Lifecycles have reached their End.

Step 1: How to Individually Intune Enroll a Device (Powershell script and Admin Join to Intune Methods)

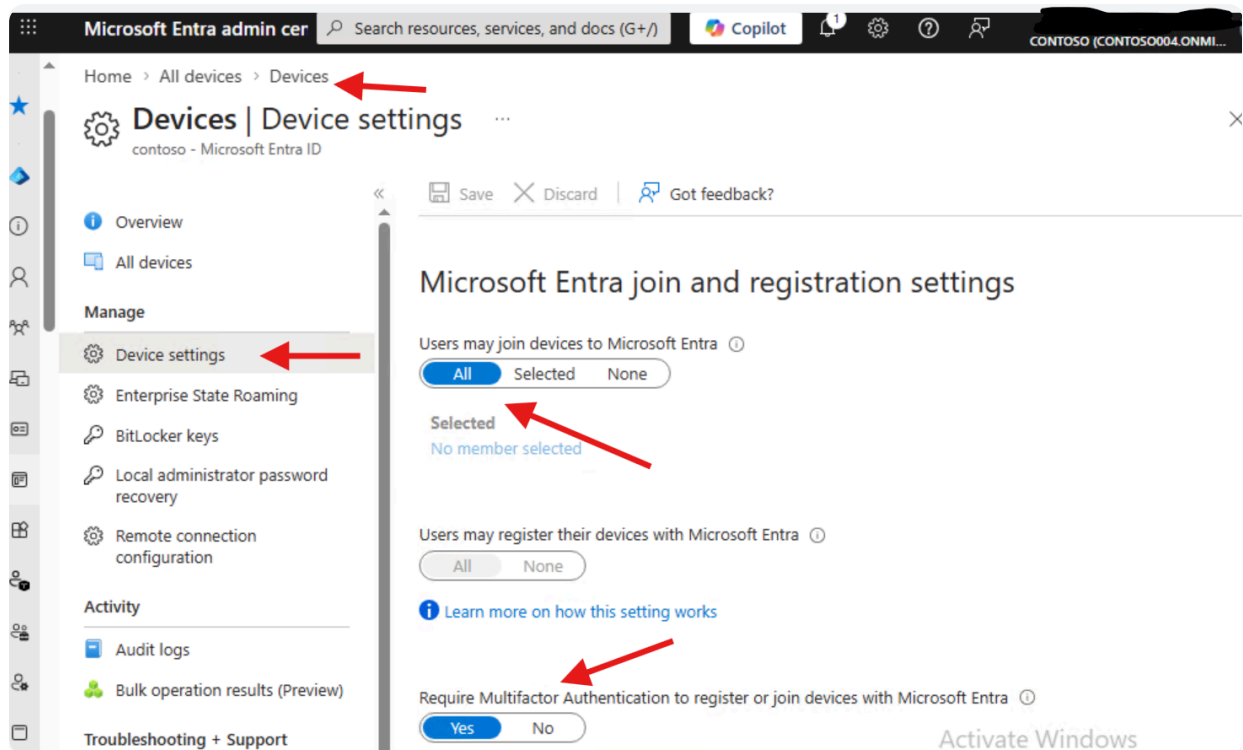

Manually registering devices into Intune as a Windows Autopilot device via the hardware hash. The hardware hash of a device can be collected via one of the following methods:

- Configuration Manager.
- PowerShell script.
- Diagnostics page hash export.
- Desktop hash export.

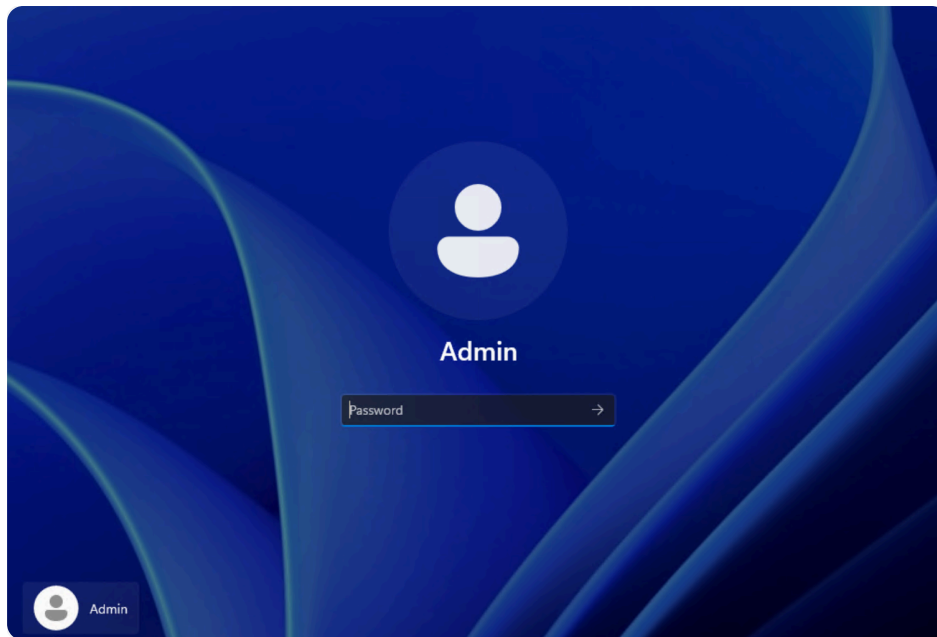

1st Option "**Entra ID**" Join

Admin "work or school Join to Intune"

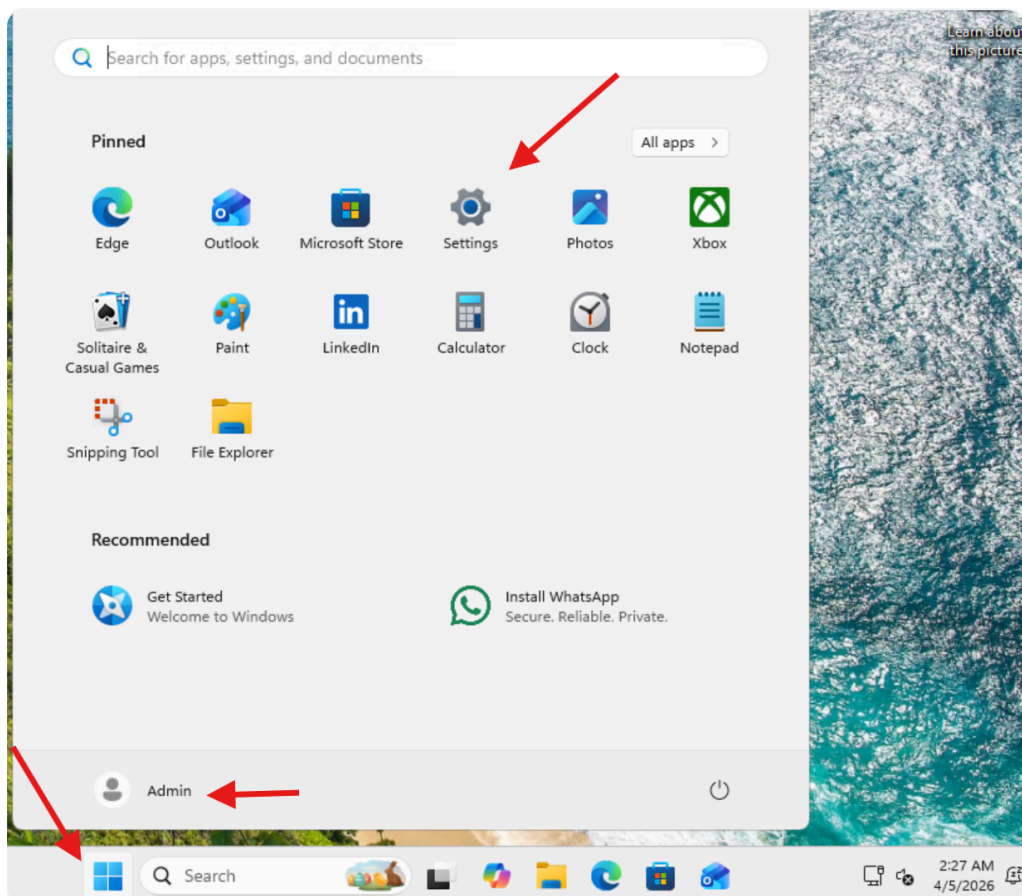

First In Entra Admin center - Go to "Devices" then go to "Device Settings" Then Select "Yes"

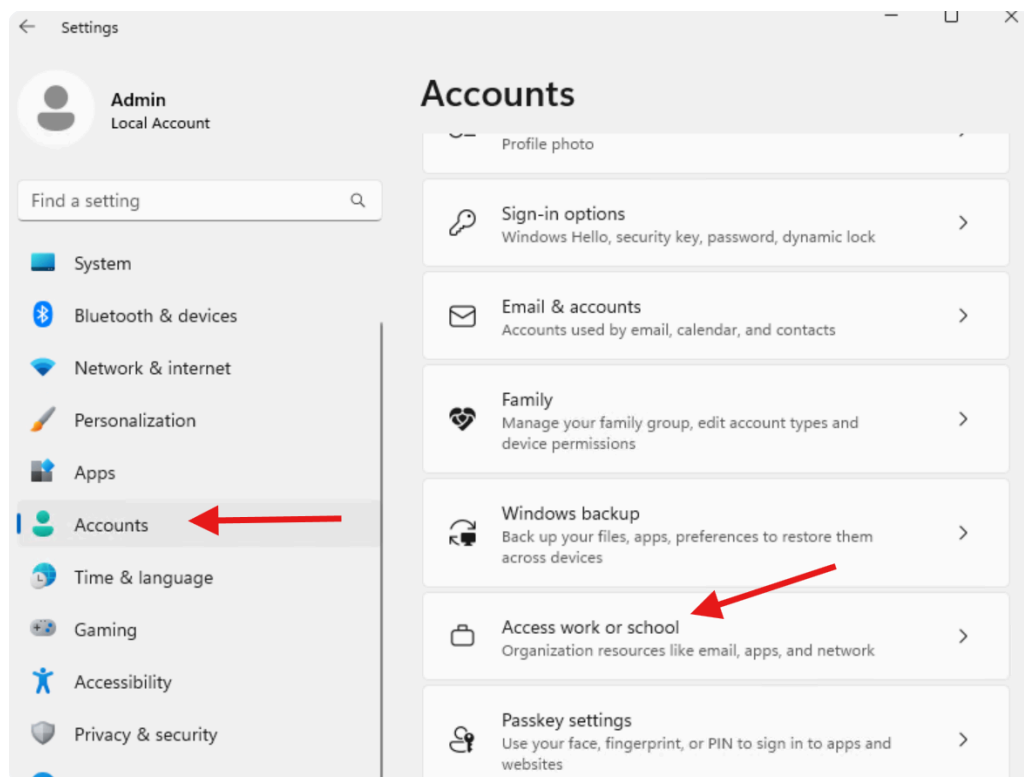

Sign in to the Device with an Administrator account

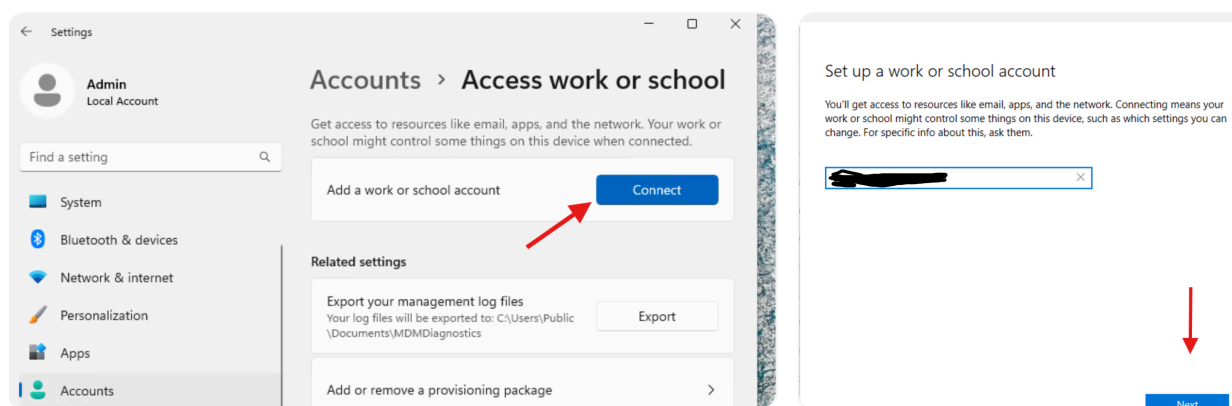

Sign-in Click the Windows Icon and Go to Settings

Go to "Accounts" and Click on "Access Work or School"

Click the **"Connect"** button and input you **"Intune Administrator"** Credentials to add it to you **Intune Device**

It will take a moment to **"Register"** the Device into Microsoft Intune Devices

[Redacted]

Registering your device...

Hold on while we register this device with your company. This might take a minute.

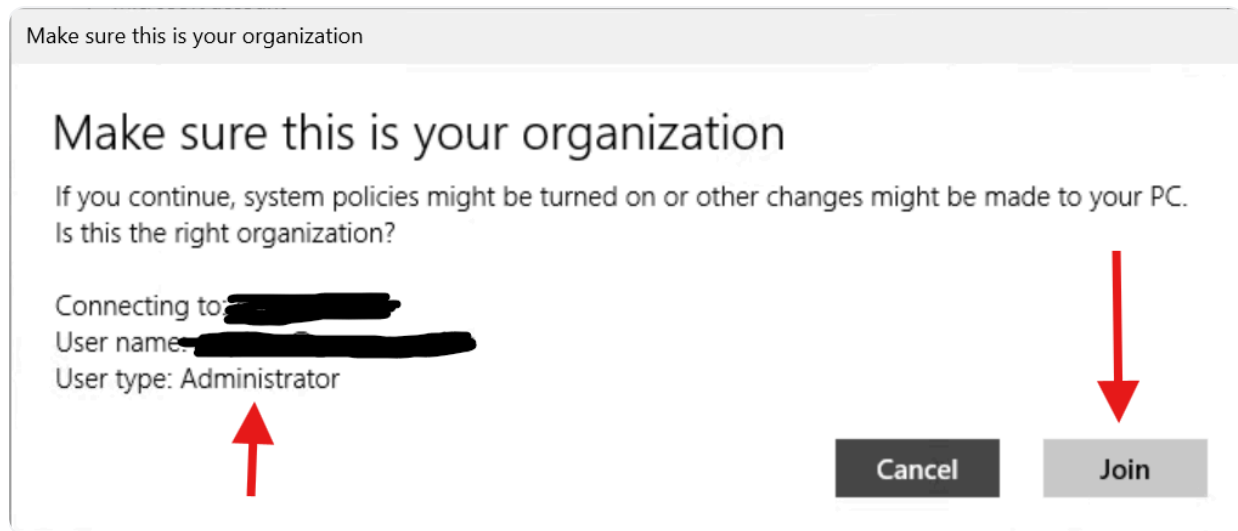

[Redacted]

Account added to this device

You now have access to your organization's apps and services. If this is a shared device, make sure to remove your information when finished.

Done

Then You will receive another **pop-up** window Confirming you to Join the **"Organizations Domain"**. Click "Join"

Congratulations, you have now been Joined to the Organization

You're all set!

This device is connected to contoso.

When you're ready to use this new account, select the Start button, select your current account picture, and then select '**Switch account**'. Sign in using your [redacted] email and password.

Done

Now Perform a sync, by performing a sync on the Device it will become a newly joined **Intune-managed device** Instead of just Entra joined - Scroll down to **"Device Sync Status"** and Click **"Sync"**

*This forces an **immediate check-in** between the **device** and the **Intune service** the action retrieves pending **policies, app deployments, compliance status updates, and configuration changes instantly**, bypassing the default automatic check-in interval

Accounts > Access work or school

Get access to resources like email, apps, and the network. Your work or school might control some things on this device when connected.

Add a work or school account

POWERSHELL SCRIPT Adding a Device To Intune

We Will be using the Powershell Script for this Deployment.

Open Windows Powershell As Admin from the Machine you are looking to add to Intune.

Use the Following Command to manually register devices into your Intune Deployment.
"Install-Script Get-WindowsAutoPilotInfo" And **Input Y** and **"Enter"** to accept variable changes. Then you will be asked to Install the **nu-Get Module** as it is a requirement Type **"Y"**

Powershell script for Windows AutoPilot has successfully been downloaded to the Windows 11 Machine

```
Administrator: Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Users\Stephen> install-Script Get-WindowsAutoPilotInfo

PATH Environment Variable Change
Your system has not been configured with a default script installation path yet, which means you can only run a script
by specifying the full path to the script file. This action places the script into the folder 'C:\Program
Files\WindowsPowerShell\Scripts', and adds that folder to your PATH environment variable. Do you want to add the script
installation path 'C:\Program Files\WindowsPowerShell\Scripts' to the PATH environment variable?
[Y] Yes [N] No [S] Suspend [?] Help (default is "Y"): Y

NuGet provider is required to continue
PowerShellGet requires NuGet provider version '2.8.5.201' or newer to interact with NuGet-based repositories. The NuGet
provider must be available in 'C:\Program Files\PackageManagement\ProviderAssemblies' or
'C:\Users\Stephen\AppData\Local\PackageManagement\ProviderAssemblies'. You can also install the NuGet provider by
running 'Install-PackageProvider -Name NuGet -MinimumVersion 2.8.5.201 -Force'. Do you want PowerShellGet to install
and import the NuGet provider now?
[Y] Yes [N] No [S] Suspend [?] Help (default is "Y"): Y

Untrusted repository
You are installing the scripts from an untrusted repository. If you trust this repository, change its
InstallationPolicy value by running the Set-PSRepository cmdlet. Are you sure you want to install the scripts from
'PSGallery'?
[Y] Yes [A] Yes to All [N] No [L] No to All [S] Suspend [?] Help (default is "N"): Y
PS C:\Users\Stephen>
```

Next type **"Clear"** Now use this command to allow for further modifications **"Set-ExecutionPolicy Unrestricted"**

```
Administrator: Windows PowerShell

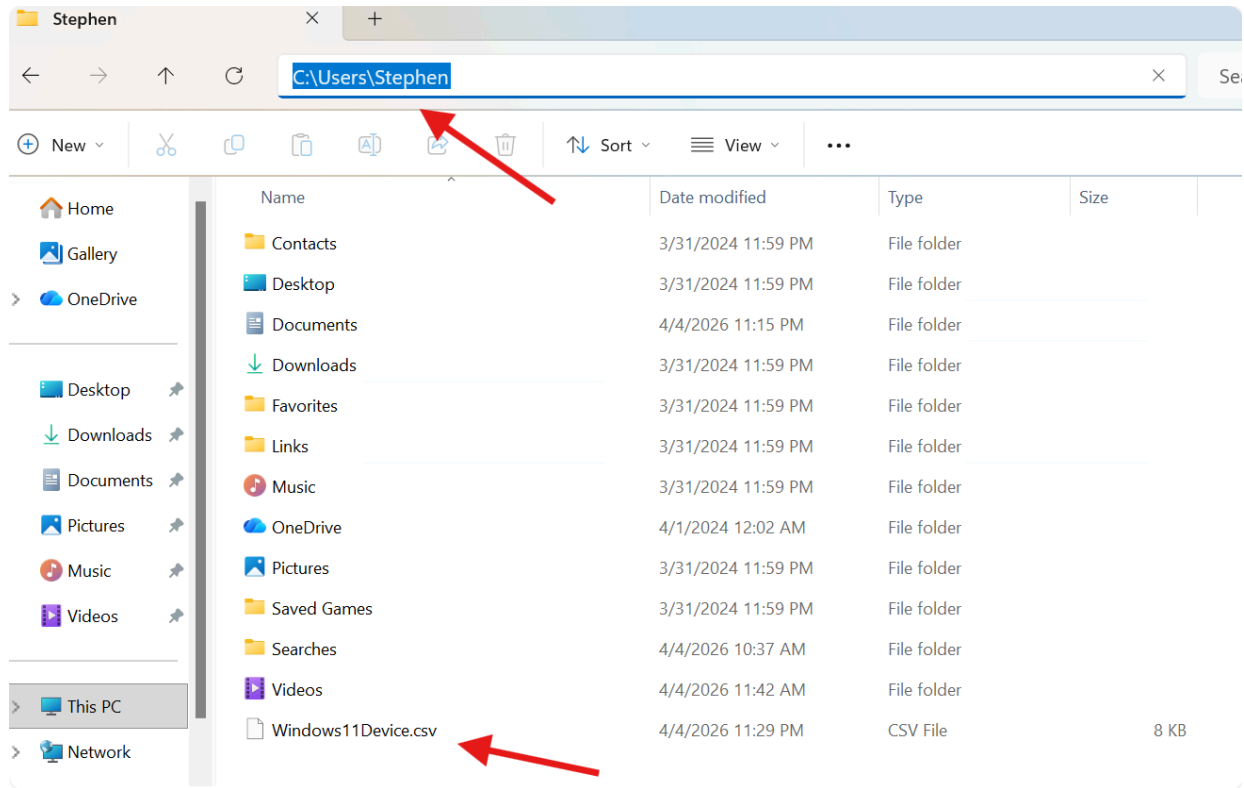

PS C:\Users\Stephen> Set-ExecutionPolicy Unrestricted
```

Then Execute this command to Output a .CSV file to Generate the **Devices Hardware Hashes** needed for **Windows AutoPilot** to add the Device to **Intune**. Information to a .CSV output. **"Get-WindowsAutoPilotInfo.ps1 -OutputFile Windows11Device.csv"**

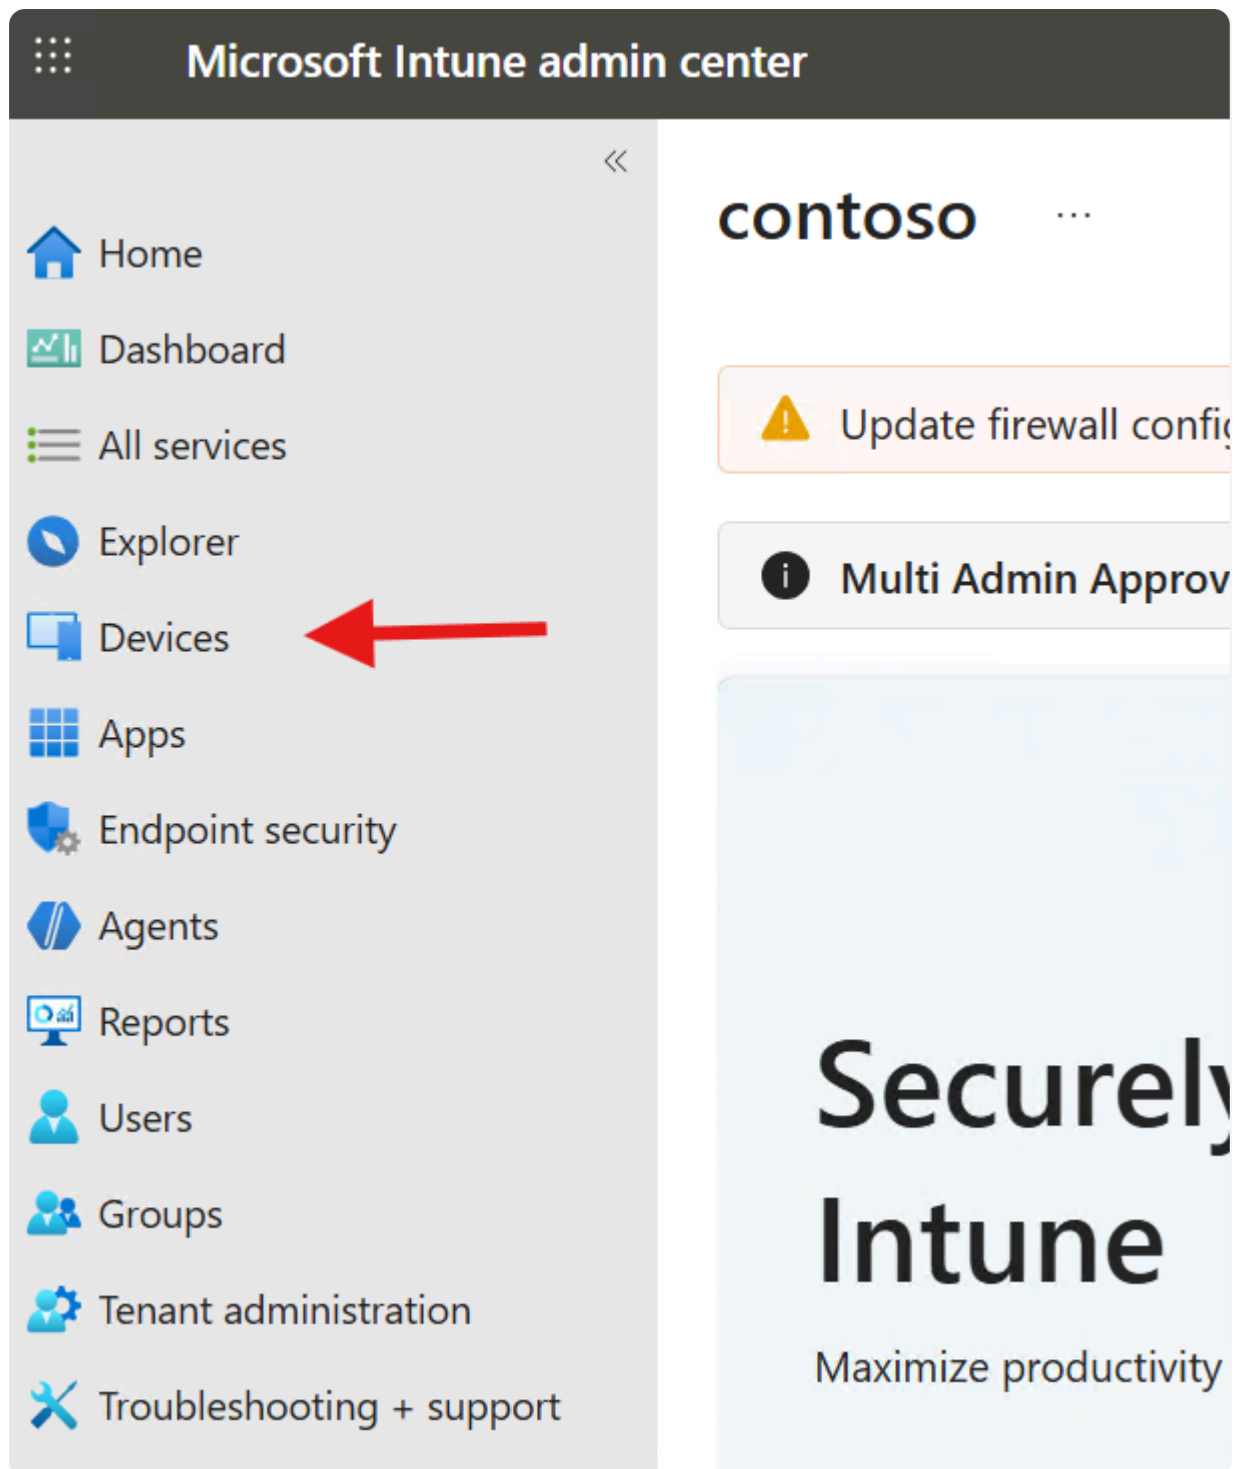

```
Administrator: Windows PowerShell

PS C:\Users\Stephen> Get-WindowsAutoPilotInfo.ps1 -OutputFile Windows11Device.csv
Gathered details for device with serial number: To Be Filled By O.E.M.
```

Look for the .CSV output File in the **Windows File Explorer** will be Located in the Local C:/Drive under **"C:\Users\Nameofpcuser"**

Now go to **Upload** the **Hardware Hash CSV** file to **Microsoft Endpoint Manager** at <https://endpoint.microsoft.com> Then Click On "**Devices**"

Under "Device | Overview" Select Device Onboarding - "Enrollment"
